To Mr. Asa Gray

Dear Sir

Herewith please find P.O.
draft to cover amt required for Flora
which I look forward to receiving with
most eager anticipation.
As I am certain the miserly remittance
will not in the least offset the
pleasure and benefit I shall
derive - mean to try and "make
it good" by sending you shortly
a few "jewels". I fished up in
Sta Catalina Island last week
which seem to have escaped the
travied eye of Wallace, Gambel,
and Palmer, and been reserved
for "babes and sucklings" to gather in.
Friend Kern tho' a better botanist
is a poorer sailor and there I
had him at a disadvantage. For

he would not undertake 30 miles
of open sea in a small boat.
Hence I got away with the
nautical and botanical pots.

A couple of new? Rosaceous trees
and an odd looking Phacelia
complete my "trivels" for you
while for Prof. Watson - I
trust that which will make
his heart rejoice - i.e., fine
specimens of that superlative
beauty. *Eriogonum arborescens*,
of which I find a somewhat
lame descr. by Greene in
last report of Cal. Academy,
and which - I assume was
made from poor specimens.
Among the "lesser lights" I gathered
in were a few that I quote
and which I have in duplicate
and if you see among the list
one of interest which you might
wish you need only indicate
them in order to secure a line.

Otherwise I shall not burden
you with "trash" and myself with
packing etc. With great respect
and thanks, for services and the monograph on
^{and thanks, for services and the monograph on}
~~only~~ ^{only} ^{trifles} very truly Yours
Wm. J. Lyon.

List of Catalina plants.
